

Watch Out Where You Are Pointing That Thing

Stabilized approaches and go-arounds can be key to avoiding many Loss of control accidents (LOC) events. Suggestions for how to achieve stability, how to avoid destabilizing influences, and tips and tricks are presented. Before you take to the air, be certain you will land it where and when you planned. What you need to know before you fly your aircraft for its maiden voyage.

Directions: Attendees with Class II, Non-SIDA access to Abilene Regional Airport can park on the ramp in front of the hangar. All others can park in the TSTC parking lot next to our hangar, or on the grass behind the hangar, provided it has not recently rained.

A message from the National FAASTeam Manager
